OUR SERVICES

VIASTRADA

Design & safety

We provide design solutions for both urban and rural intersections and corridors, including scheme design, safety audits and peer review. We also offer a range of services to help with transport aspects of development projects.

- Land development traffic engineering and assessments
- Complete street & corridor concept design
- Traffic signals & roundabouts
- Bus stop and interchange planning, design and review
- Road safety audits (concept to post construction)
- Walking and cycling facility design and advice

Planning & policy

We plan for all modes: public transport (PT), freight, private vehicles, walking and cycling. We have also developed and reviewed various strategic plans and helped to investigate transport policy and practices.

- Strategies, master plans & business cases
- Network planning, GIS analysis, mapping
- Development Integrated Transport Assessments (ITAs)
- Speed management reviews & strategies
- Travel plans & travel demand management (TDM)
- District plan reviews, legislation & regulations

Research & trials

We carry out transport research, develop data monitoring frameworks, conduct traffic studies, and trial new traffic control devices or infrastructure. Many of these involve data collection and result in changes to industry practices, guidelines, and legislation.

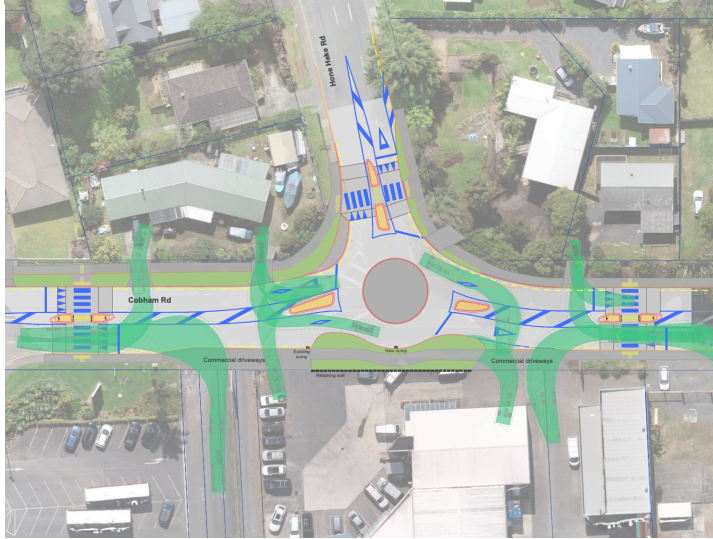

- Transport research
- Safety research
- Traffic control device trials
- Data collection and analysis
- Transport user surveys

Training & guidelines

We use international best-practice to provide guidance for the industry in partnership with various national agencies. This expertise also feeds into our industry training and other presentations.

- Urban street design industry training
- SIDRA Intersection modelling training
- Walking, cycling & PT guides
- Presentations and lectures
