

ViaStrada Ltd is a traffic engineering and planning consultancy with its head office in Christchurch.

Our planners and other experts undertake a variety of work, ranging from statutory and policy planning under the Resource Management Act through to more strategic planning work and technical assessments for both public and private clients.

ViaStrada's traffic engineers and transport planners are involved in traffic signal and roundabout design, traffic impact assessment, transportation policy, design audits and industry training.

## WHAT WE DO...

### → TRAFFIC ENGINEERING

ViaStrada undertakes traffic engineering projects for local councils including the design of intersections (such as traffic signals and roundabouts), safety audits, peer reviews and transport policy and research.

### → TRAFFIC ENGINEERING STANDARDS

ViaStrada provides advice on traffic engineering design manuals on both sides of the Tasman. Our engineers are well known nationally for their expertise in walking and cycling design. They have provided advice on engineering design manuals in both NZ and Australia. We also have been involved in the refinement of general road design and intersection standards, guidelines and manuals.

### → TRANSPORT PLANNING AND POLICY

We develop strategies and policy documents for national and local government. Our emphasis and edge over others is our underlying philosophy of sustainability. Most of our staff walk, cycle or bus to work - we walk the talk.

### → TRAINING AND RESEARCH

ViaStrada provides continuing professional development training, including planning and design courses for walking and cycling and "SIDRA Intersection" workshops. We undertake transport research for national agencies.

### → PLANNING

Planning (other than that under the Resource Management Act) is also undertaken by ViaStrada, including master and strategic planning, consultation, development contributions, and the development of bylaws.

### → RESOURCE MANAGEMENT

ViaStrada provides extensive professional advice and assistance in the residential, rural, retail, commercial, industrial and utility sectors. This has predominantly included the preparation or assessment of land use consent, plan change or notice of requirement or designation applications and the presentation of evidence at Environment Court and council hearings. We work for both public and private sector clients.

### → RMA - TRANSPORTATION PLANNING AND TRAFFIC ENGINEERING

ViaStrada is able to provide comprehensive Traffic Impact Assessments (TIAs) to support plan change or resource consent applications. Associated traffic-related services include: road, intersection and site design and parking demand and trip generation surveys.

### → ENVIRONMENTAL HEALTH

ViaStrada undertakes assessments of air quality and noise impacts associated with developments, both for councils and private clients. These are usually in the context of district plan changes or resource consent applications.
